

Aditi Anand Jadhav

Full Stack Developer — Cloud — DevOps
(+91) 9322459002 — aditiaj100@gmail.com — LinkedIn

PROFILE

Full-stack Developer with nearly 2 years of experience designing, developing, and deploying scalable enterprise applications. Skilled in Java, Spring Boot, React.js, Python, FastAPI, REST APIs, microservices, Docker, Kubernetes, AWS, Google Cloud Platform (GCP), and CI/CD, with expertise in cloud-native development, DevOps, and AI-powered solutions.

EDUCATION

MKSSS's Cummins College of Engineering for Women, Pune <i>Bachelor of Technology - Information Technology</i>	Pune, Maharashtra <i>2020 – 2024</i>
---	--

TECHNICAL SKILLS

Frontend: React.js, JavaScript, HTML5, CSS3, Lighthouse Audits
Backend: Spring Boot, REST APIs, Java, Python, SQL, NoSQL, REST APIs, GraphQL, Microservices, Spring Security, JWT
DevOps: Docker, Kubernetes, Jenkins, GCP, AWS, CI/CD, SonarQube, GitHub Actions
Testing: Unit Testing, BDD, TDD, Cucumber, Mockito, JUnit, JMeter, Playwright
Monitoring: Prometheus, Grafana

WORK EXPERIENCE

Publicis Sapient <i>Associate Software Development Engineer</i>	Gurugram, India <i>Nov 2024 – Present</i>
AI-Powered Photo Intelligence Platform	<i>Present</i>

- Developed a multimodal AI-powered image analysis platform using **Python, FastAPI, React.js, and Google Cloud Platform (GCP)** to automate image validation, duplicate detection, face grouping, and event classification.
- Built scalable backend APIs and preprocessing pipelines to process uploaded ZIP files, extract metadata, validate images, and store assets in **Google Cloud Storage (GCS)**.
- Integrated **Model Context Protocol (MCP)** tools to enable AI-driven image classification, clustering, workflow automation, and structured PDF/JSON report generation.
- Containerized services using **Docker** and deployed cloud-native applications on **Google Cloud Run** through automated **CI/CD** pipelines.

Enterprise Fraud Detection Platform (NatWest Bank)	<i>Oct 2025 – Feb 2026</i>
---	----------------------------

- Developed a secure full-stack fraud detection platform using **Spring Boot, React.js, PostgreSQL, and Spring Security** for reporting and managing suspicious financial transactions.
- Implemented **JWT Authentication** and **Role-Based Access Control (RBAC)** to secure REST APIs and user dashboards.
- Designed PostgreSQL database schemas and developed RESTful APIs for fraud case management, audit logging, and automated risk scoring.
- Containerized applications using **Docker** and deployed microservices on **Kubernetes (AWS EKS)** with automated deployment through **GitHub Actions** and CI/CD pipelines.

Economic Crime Prevention Platform (Lloyds Bank)	<i>Apr 2025 – Sep 2025</i>
---	----------------------------

- Developed automated test frameworks using **Playwright, TypeScript, Cucumber, and BDD** practices for cloud-native banking applications.
- Built and maintained **Jenkins CI/CD** pipelines to automate software build, testing, deployment, and release workflows.
- Managed deployment of containerized applications on **Google Cloud Platform (Cloud Run)** and administered **Google Cloud Storage (GCS)** resources.

- Collaborated with development and DevOps teams to improve deployment reliability, release quality, and production stability.

Banking Analytics Platform (Lloyds Bank)

Dec 2024 – Feb 2025

- Developed and supported enterprise ETL/ELT data pipelines using **Java, Spring Boot, and Google Cloud Platform**.
- Monitored production systems using **Prometheus** and **Grafana**, investigated pipeline failures, and resolved data processing issues.
- Validated business metrics and analytical reports using **Looker** dashboards while ensuring data quality and accuracy.
- Improved platform reliability by optimizing cloud deployments, monitoring solutions, and data workflow performance.

Projects

Android Botnet Detection Using Machine Learning

- Developed a machine learning-based Android malware detection system using Python to identify botnet behavior and malicious applications, achieving **92% classification accuracy**.
- Reduced false positives by approximately **30%** through feature engineering, network traffic analysis, and data preprocessing techniques.
- Applied supervised machine learning algorithms for malware classification and performance evaluation.

Bank Token Management System

- Developed a banking queue management system using **Java** and **SQL** to automate token generation and customer queue management.
- Improved customer service efficiency by approximately **25%** through workflow automation and optimized queue processing.
- Designed a user-friendly interface for token generation, queue tracking, and service management.

Certifications

- **Google Cloud Digital Leader** (2025)
- **AWS Partner Accreditation (Technical)** (2025)
- Cloud Computing Program – IIT Bhubaneswar
- Web Development Program – IIT Bombay
